

Barcode Scanning Solutions for GE Centricity

Increase Practice Efficiency
Lower Operational Cost
Deliver Quality Patient Care
Analytics with Error Free Data

TriNet Medical's Patient Centric Medication Tracking Solution (SRX)

TriNet SRX solution allows you to scan 1D or 2D Barcodes on vaccines, medications or medical supplies to automate and facilitate capture of data, such as NDC, Lot Numbers, Manufacturer, etc. in GE Centricity EMR/CPS forms. This data capture process does not impact existing process workflow allowing easy integrations and user acceptance. It increases practice productivity and accuracy of patient data. In addition, SRX also provides inventory tracking and real-time reporting.

Data Entry using Barcode Scan (No Manual Data Entry)

Printed barcodes are scanned and error-free medication information such as NDC code, Lot Number, Expiration Date, etc. is automatically retrieved into CPS & CEMR.

Faster Billing

No extra hours of work is needed for manual data entry into multiple systems at the end of the day or end of the week. This significantly improves billing cycle time.

Inventory Management

Medication and inventory details are stored in industry standard SQL database. The system supports tracking of inventory at multiple practice locations. It also allows tracking of expired and recalled medications within the system.

Industry Standard Interfaces

SRX supports HL7, Web Services, XML and other standard interfaces to allow integration with other healthcare applications. SRX supports both- HTML and Encounter forms.

Note: Complete integration & support for all versions of GE CEMR and CPS.

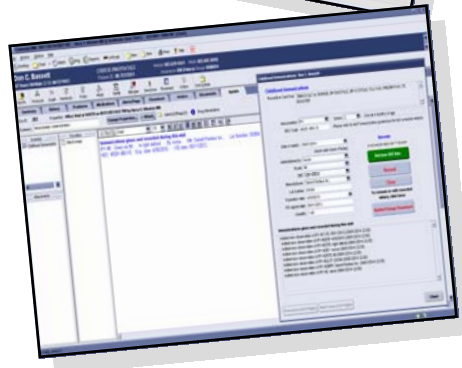

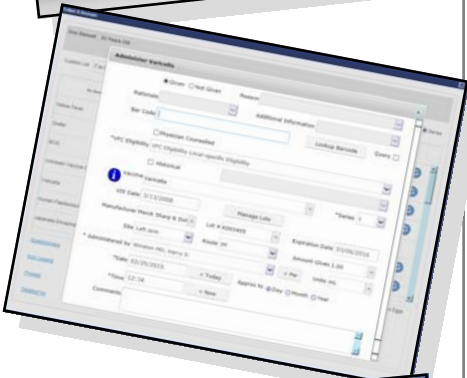

Reports

Built in reports provide details of vaccine usage and medication inventory. These assist in managing medication supply and the ordering process.

Why TriNet?

- ✓ GE Certified solution; In use since 2009
- ✓ Direct integration from within latest versions of GE Centricity EMR and CPS
- ✓ Simple installation and monthly billing model (Cloud ready)
- ✓ No manual data entry; No data errors
- ✓ No changes in your work flow; No additional training requirements
- ✓ Reduces over 70% of staff's medication data management time
- ✓ Real time Inventory tracking & reporting
